

# Now you can see what your numbers say.

## VISIPILOT

By Micro Finance Systems

VisiPlot™ software automatically creates high resolution graphs and charts more easily and quickly than ever before. Without any programming, you can instantly visualize data in six different formats and six different colors.

Use data entered directly or data files loaded from our new VisiCalc™ program version. VisiPlot graphs and charts will help you better understand business information and better communicate that information in reports and presentations.

### How You Can Use VisiPlot Software:

- ☐ You can prepare graphs and charts for proposals, presentations, business analysis and other uses.
- ☐ You see the inter-relation of business data; how sales relate to costs, for example.
- ☐ You can graphically chart such data as stock prices, investments, production, population, surveys or other numerical information.
- ☐ You can use VisiPlot as a graphic aid in budgeting, comparing information, portfolio management or marketing.

### How You Benefit:

- ☐ You perceive complex business inter-relationships visually.
- ☐ You produce presentation graphs and charts quickly and easily.
- ☐ You follow business trends at a glance.
- ☐ Your proposals take on the added dimension of graphic information.

### Features

- ☐ A variety of display formats are available to suit your needs, including: Line graphs, Bar graphs, Area charts, Pie charts, High-Low chart, Scatter chart.
- ☐ Charts and graphs display in color if your display device has that capability.
- ☐ VisiPlot automatically scales its graphs to your data – there are no complex instructions.
- ☐ Enter your information into VisiPlot directly, or transfer information from the new, enhanced VisiCalc™ program.
- ☐ Powerful VisiPlot "editor" lets you alter your data – interpolate between points for example.
- ☐ You can "overlay" graphs for more than one data series – multiple line graphs, or cumulative bar charts for example.
- ☐ You can "split" bar graphs for side-by-side comparisons.
- ☐ "Window" command lets you display two graphs based on different data at the same time – top-and-bottom or side-by-side.
- ☐ Pie chart allows you to display data for identical periods in proportion to their value – for example, a pie made up of distributor, dealer and retail sales for the same month.

### Computer Requirements:

Apple II: with Applesoft BASIC, 48K memory and two disk drives. VisiPlot is 16-sector compatible, with or without Language System. Graphs may be printed directly to Apple Silentyte, Trendcom 200, IDS Paper Tiger 440 and 445, or NEC Spinwriter.

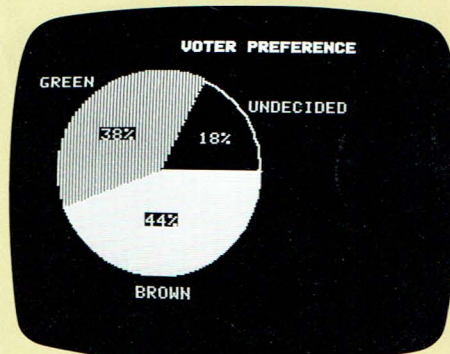

### Personal Software Inc. User Assurance Plan:

Personal Software Inc. supports the purchaser of this software product with its User Assurance Plan Coverage which includes a 90-day Limited Warranty plus Replacement, Backup and Upgrade policies which together provide the most comprehensive software user coverage in the personal computer industry.

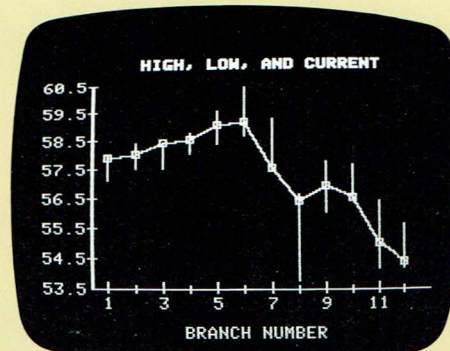

### Other Personal Software Products:

VisiCalc, VisiDex, VisiTrend/VisiPlot, VisiTerm, Desktop/PLAN II and CCA Data Management System.

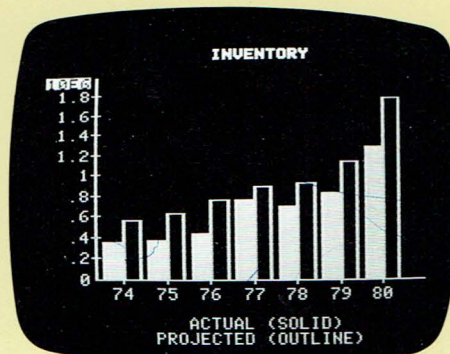

Produce these and many other high quality graphs:
